# Executive Summary

POLLARA is pleased to present to Health Canada, this report based on a nationwide telephone survey conducted with a random sample of 1,699 adult Canadians between August 20th and August 29th, 1999. The overall purpose of this study was to examine public opinion and Canadians' levels of support and degrees of comfort with respect to proposed legislation in the area of reproductive and genetic technologies (RGTs).

Canadians' awareness of RGTs is high, with 89% of respondents reporting that they have some knowledge of reproductive and genetic technologies. Notably however, Canadians' knowledge and understanding of the subject is more cursory than deep, as their mean knowledge rating is only 5.5, the midpoint on the 10-point scale. Indeed, while 35% indicate that they are *somewhat* or *very knowledgeable* about the field, an equal proportion (36%) provide more average assessments of their level of knowledge, while 29% report that they are either *not very* or *not at all knowledgeable* about the topic. The middle-aged, particularly the women (who are probably either more likely to be experiencing infertility problems personally or know someone who is), along with those who specifically indicate that they know someone with an infertility problem, are more likely to report that they are either *very* or *somewhat knowledgeable* on this subject, as are the more affluent and better-educated.

Notwithstanding their lack of deep understanding or knowledge of the field, in general, Canadians support government intervention in the area of reproductive and genetic technologies. They believe the current situation is unsatisfactory and they clearly want to see changes take place in the RGT area. Consequently, Canadians are supportive of the federal government legislating the RGT field. Indeed, a majority of the respondents support the creation of a new regulatory agency that would not only oversee and regulate RGTs on a national basis, but also educate and inform Canadians about the issues. However, not surprisingly, Canadians contend that the agency must consult with both stakeholders and the general public on emerging issues and new technologies prior to making regulatory decisions (63% *very important* and 25% *somewhat important*).

Canadians have high expectations of the new regulatory agency, believing it should have many different objectives and roles. In particular, the agency should concentrate its efforts on ensuring the "human reproductive materials, such as sperm, eggs and embryos, are treated with respect" (90% important), and "keeping abreast of emerging issues and new technologies and keeping Canadians informed of these" (87%). Other objectives that are

also viewed as crucial include: "protecting the welfare of all persons, especially women using these techniques and children who are born as a result of them" (83%); "safeguarding the health of Canadians by regulating certain practices and banning others" (82%); and "setting ethical standards for the use of reproductive and genetic technologies in society, such as the commercialization of sperm and eggs" (75%). In comparison, the protection of "vulnerable members of our society, such as surrogate mothers or donors who may be motivated to provide their services or eggs because they need the money" (68%) is less important to Canadians.

In terms of regulatory activities, Canadians feel the new agency's priorities should be "inspecting clinics and research laboratories performing these technologies and distributing licences if certain standards are met" (88% important), and "setting national standards for the safe practice and application of these regulated technologies in clinics and research laboratories" (87%). The establishment of registries so that the results, such as success rates, are available to the public, is less of a concern to Canadians, although even so, a majority of 79% do view this as important.

Further evidence of Canadians' support for government legislation is the majority (56%) of respondents who believe prohibiting specific unacceptable reproductive and genetic technologies is important, while only 18% report that it is unimportant.

Canadians clearly distinguish between genetics-based technologies and reproductive technologies. They tend to view the genetics-based technologies, such as cloning, genetic manipulation, sex selection for non-medical purposes, and the use of genetic material from the dead, more negatively, believing that they are unacceptable. The clear preference is for these activities to be banned entirely, rather than regulated but allowed. In contrast, Canadians view reproductive technologies, such as egg and sperm donation and surrogacy arrangements, as more acceptable, believing they should be allowed, albeit regulated.

The most offensive RGT, a genetics-based activity, is the "cloning of human embryos", with three-in-four (74%) Canadians indicating that this activity should be banned. "Changing the genetic make-up of egg and sperm so that certain inherited traits are altered to change the physical characteristics of a child" is also unacceptable to Canadians, as 66% of those surveyed want this activity prohibited. Similarly, 60% of Canadians want sex selection for non-medical reasons to be prohibited. Two other genetic technologies

where a majority, albeit a slim majority, of respondents feel they should be banned include: "the retrieval of sperm or eggs from dead men or women to help people have a baby" (53%); and "changing the genetic make-up of egg and sperm so that certain inherited traits are permanently altered for future generations" (52%).

In comparison, two other genetics-based technologies are viewed as more acceptable, with a majority preferring that they be regulated rather than banned entirely: "removing reproductive material from fetuses for research or to help other people have a baby" (52% regulated versus 27% banned); and "research on embryos" (52% versus 24%). Similarly, support for the regulation of the three reproductive technologies is higher than support for their prohibition - "payment to a surrogate mother who carries a child for someone else" (48% versus 26%), "paying female donors for their eggs" (40% versus 33%), and "paying male donors for their sperm" (40% versus 29%).

In conclusion, Canadians would welcome the upcoming federal legislation in the RGT field. However, further education and consultation with the public is recommended as knowledge and understanding of the different issues associated with the RGT area would likely increase support for the various parts of the legislation. Notwithstanding this, Canadians do support the creation of a new national regulatory body that would both oversee and regulate the field and also educate the public and keep it apprised of current issues and new technologies. However, the agency's primary objectives should be to ensure that human reproductive materials are treated with respect, to protect the welfare of all persons involved in the RGT process, to safeguard the health of Canadians and to set ethical standards for the use of the different technologies.

In terms of legislating the specific reproductive and genetic technologies, Canadians would support the government banning a number of genetics-based technologies, such as cloning, genetic manipulation, human embryo research and sex selection for non-medical purposes. However, there would be more opposition to the prohibition of reproductive technologies, such as egg and sperm donations and surrogacy arrangements as Canadians are more comfortable with these activities, although it is believed that they should still be regulated at the very least.

# I. Introduction

## A. Background

POLLARA is pleased to present to **Health Canada**, this report based on a nationwide telephone survey conducted with a random sample of 1,699 adult Canadians between August 20th and August 29th, 1999. This is Phase 2 of a three-phase study of Canadians' views of the various issues surrounding reproductive and genetic technologies.

Prior to the tabling of the proposed legislation on reproductive technologies and genetic research (RGT), Health Canada wishes to examine public opinion on the subject. The overall purpose of the study, then, is to examine public opinion and Canadians' levels of support and degrees of comfort with respect to the proposed legislation. To this end, this survey would identify some general issues, such as:

- Canadians' knowledge of RGTs;
- Canadians' preference for the prohibition or regulation of specific RGTs;
- Canadians' views of the importance of safeguarding the health of Canadians, protecting vulnerable members of our society, recognizing the needs of infertile couples, and setting ethical standards for the use of RGTs;
- Canadians' understanding of why the government is trying to regulate RGTs;
- Canadians' tolerance regarding government involvement;
- Canadians' acceptance for a new regulatory agency outside of Health Canada; and
- Canadians' expectations regarding the role to be played by the new regulatory agency.

# B. Methodology

## i. The Sample

In total, 1,699 telephone interviews were conducted with a randomly selected sample of Canadians, 18 years of age or older. This sample was distributed disproportionately across the country, with additional surveys conducted (i.e., oversampling) to reach a minimum of 300 residents from any one region. This was undertaken in order to provide relatively reliable regional results. That is, more respondents were surveyed in Atlantic Canada, the Prairies and British Columbia than would normally have been called for with a proportionate sample so that the results of these residents could be analyzed with a higher degree of confidence than would have been the case.

However, when analyzing overall national results, the sample must be representative of the national population and accurately reflect the correct regional proportions. Consequently, the Atlantic Canadian, Prairie and British Columbian surveys were weighted down to what they should have been if it had been a normal population distribution. Table A illustrates the initial and weighted sample for 1,699 interviews, across the 5 regions. The overall margin of error for the total weighted sample of 1,200 is ± 2.9%, 19 times out of 20.

**Table A**

**Regional Distribution, Weighting and Margins of Error**

| Region | Proportion of Population % | Unweighted/ Disproportionate n | Weighted Proportionate n | Margin of error (19 times out of 20) |
|---|---|---|---|---|
| Atlantic Canada | 8.1 | 300 | 98 | ± 5.6% |
| Québec | 24.8 | 300 | 296 | ± 5.6% |
| Ontario | 37.3 | 459 | 445 | ± 4.6% |
| Prairies | 16.7 | 300 | 199 | ± 5.6% |
| British Columbia/ Territories | 13.2 | 308 | 162 | ± 5.5% |
| **TOTALS** | **100.0** | **1,699** | **1,200** | **± 2.9%** |

### ii. The Questionnaire

The questions were designed and approved by both Health Canada and POLLARA. There were a total of 33 distinct questions, including 7 demographic questions.

POLLARA takes full responsibility for the professionalism and fairness of the research instruments we use, and meet or exceed the professional ethical requirements of the Canadian Association of Market Research Organizations (CAMRO) and the Professional Marketing Research Society (PMRS).

### iii. Interviewing

A total of 1,699 adult Canadians were interviewed by telephone between August 20th and August 29th, 1999. Interviewing was conducted at POLLARA's state-of-the-art tele-research centres in Bathurst, New Brunswick (bilingual English and French), Toronto, Ontario and Vancouver, British Columbia, using Computer-Assisted-Telephone-Interviewing (CATI).

Approximately 30% of all interviews were monitored by senior POLLARA supervisors, while 100% were supervised to ensure data quality and the swift resolution of any problems. Interviewers are careful at all times to respect the privacy and schedule of respondents. Refusals are graciously accepted and interviews are rescheduled with willing participants as many times as necessary.

Again, POLLARA maintains strict quality control procedures in accordance with guidelines established by CAMRO and the PMRS. As a CAMRO member, POLLARA participates in regular audits of its research methodology. Senior POLLARA personnel, including those involved in this study, are also members in good standing of PMRS, which sets guidelines for ethical and professional conduct, as well as providing members with the opportunity to keep abreast of emerging developments in market research.

## C. Analysis and Reporting

The main section of this report details the results of each question in the

survey, illustrated with figures and tables. The report also indicates any significant socio-demographic variations in responses based on gender, age, educational background, parenthood, and annual household income, along with whether they personally know anyone with an infertility problem.

The Interview Schedule that is included in the Technical Appendix is an easy-to-understand summary of the data, consisting of the actual question text, with the survey results inserted beside each question.

# II. Knowledge of Reproductive and Genetic Technologies

Respondents were initially read a definition of Reproductive and Genetic Technologies (RGTs), after which they were asked about their level of knowledge about these types of technologies. The definition is as follows:

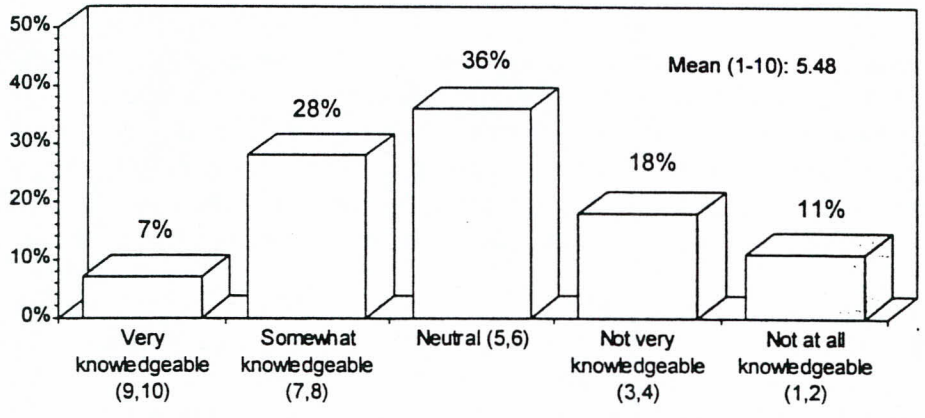
*Reproductive and genetic technologies include a wide range of activities, both old and new. Reproductive technologies attempt to produce a pregnancy by such processes as in vitro fertilization[1], donor insemination and surrogacy arrangements. Genetics-based technologies include sex selection, embryo research and prenatal diagnosis. Many of these reproductive and genetic technologies are currently practiced in Canada.*

Consistent with the results of Phase 1, virtually all (89%) Canadians report that they have some knowledge of reproductive and genetic technologies (Figure 1). One-in-three (35%) respondents rate their knowledge of RGTs between 7 and 10 on a 1 to 10 scale or *somewhat* or *very knowledgeable*. Another 36% of those surveyed provide more neutral or average assessments of 5 and 6 in terms of their level of knowledge of the subject matter. And 18% of the respondents rate their knowledge level as 3 or 4 on the 10-point scale, indicating that although they are not very knowledgeable on the topic, they probably have heard of it and/or know a little bit about it. In contrast, only one-in-ten (11%) Canadians are *not at all knowledgeable* about this field, providing ratings of 1 or 2.

Notwithstanding the majority of respondents who are aware of (i.e., know of) RGTs, it is notable that the mean knowledge rating is only 5.5, the midpoint on the 10-point scale, indicating that Canadians' knowledge of the subject is not very deep, but rather more cursory.

**Figure 1**

**Knowledge of Reproductive and Genetic Technologies**



Question: Thinking about your own knowledge of reproductive and genetic technologies, how knowledgeable would you say you are? Please use a scale from 1 to 10, where 10 means very knowledgeable and 1 means not at all knowledgeable.

As was apparent in the Phase 1 results, a solid majority of Canadians in all socio-demographic subgroups report at least some knowledge of reproductive and genetic technologies. However, once again, there are some subgroups who are even more likely than average to report that they have a higher than average level of knowledge of RGTs, along with those who are more likely than average to indicate that they are less knowledgeable than their fellow Canadians. More specifically, the middle-aged, along with the more affluent and better-educated claim to be the most knowledgeable on the topic. In contrast, the young, older men, the lower-income and lower-educated are among the least knowledgeable. Notably, there are no significant regional variations in terms of level of knowledge of RGTs.

**Table 1**

**Knowledge of Reproductive and Genetic Technologies**
**Socio-demographic Profile**

| More likely very/somewhat knowledgeable (35%): | More likely not very/at all knowledgeable (29%): |
|---|---|
| 45-54 years of age (45%) | 18-24 years of age (39%) |
| Women 35-54 years (42%) | Men 55 years or older (41%) |
| University educated (45%) | No post-secondary education (39%) |
| Household income $100K+ (48%) | Household income under $25K (36%) |

Not surprisingly, further analysis reveals that knowledge of RGTs is associated with whether an individual knows someone with an infertility problem, whether it be themselves or a close relative or friend. That is, those who do know someone close to them with this problem (41%) are more likely to report that they are *very* or *somewhat knowledgeable* about the topic than those who do not know anyone with this problem (29%) (Table 2). Conversely, those with no infertile friends or relatives are more likely than those who do know such individuals to classify themselves as *not very* or *not at all knowledgeable* about RGTs (35% versus 24%).

**Table 2**

**Knowledge of Reproductive and Genetic Technologies By Whether Know Someone With An Infertility Problem**

| | | *Whether know someone with an infertility problem:* | |
|---|---|---|---|
| Knowledge of RGTs: | Overall % | Yes % | No % |
| Very knowledgeable (9,10) | 7 | 8 | 6 |
| Somewhat knowledgeable (7,8) | 28 | 33 | 23 |
| Neutral (5,6) | 36 | 36 | 35 |
| Not very knowledgeable (3,4) | 18 | 16 | 20 |
| Not at all knowledgeable (1,2) | 11 | 8 | 15 |

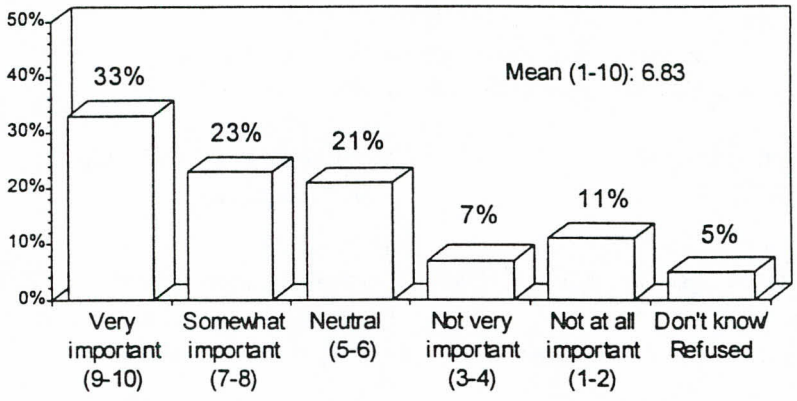
# III. The Government of Canada Instituting A Comprehensive And Balanced Regulatory Framework for RGTs

## A. Importance of Banning Specific Reproductive and Genetic Technologies

Also consistent with Phase 1's results (a majority were *very* or *somewhat supportive* of prohibiting some activities), a majority of Canadians indicate that it is important that the federal government prohibit specific reproductive and genetic technologies that are considered unacceptable by Canadians. On a scale of 1-10, 33% rate the prohibition of specific RGTs as 9 or 10 or *very important*, while 23% provide importance ratings of 7 or 8 or *somewhat important* (Figure 2). An additional 21% of the respondents provide more neutral or average ratings of 5 or 6 on the 1-10 scale. In contrast, only 18% do not feel it is important for the federal government to ban specific RGTs. The average importance rating is 6.8 on the 1-10 scale, indicating a moderate-to-high level of support for this.

**Figure 2**

**Importance of Banning Specific Reproductive and Genetic Technologies**



Question: Using a 10 point scale, where 1 represents not at all important and 10 represents extremely important, how important is it to you that the federal government ban certain reproductive and genetic technologies that are considered unacceptable by Canadians?

As was apparent in the Phase I survey, women, and especially those at least 35 years of age, are generally more supportive of banning specific reproductive and genetic technologies than men are. In particular, as Table 3 reveals, 61% of middle age to older women believe it is *very* or *somewhat important* for the federal government to ban specific RGTs.

Meanwhile, men, especially the youngest and the oldest, are less likely to view this as important, but rather more likely than average to believe it is unimportant. And once again, it is apparent that the higher educated and middle-income respondents are also more supportive of the prohibition of specific RGTs than the lower-educated and lower income. Interestingly, in this survey, the highest income earners are also more likely than average to believe the prohibition of specific RGTs is not important.

Regionally, there are virtually no significant variations. The exception is Prairie residents (62%), who are slightly more likely than Canadians in other regions of the country to view the prohibition of specific RGTs as *very* or *somewhat important.*

Despite the variations among the different socio-demographic subgroups, it is notable that even among those who are least supportive of legislation banning RGTs, no more than one-in-four rate the prohibition of RGTS as unimportant. That is, either a majority or at least a plurality of all subgroups agree that it is important to ban specific technologies.

**Table 3**

**Importance of Banning Specific Reproductive and Genetic Technologies Socio-demographic Profile**

| More likely very/somewhat important (56%): | More likely not very/at all important (18%): |
|---|---|
| Prairie residents (62%) | Men, 18-34 (24%) or 55+ (25%) |
| Women (60%), esp. those 35+ (61%) | No post-secondary education (22%) |
| Post-secondary education (60%) | Household income under $25K (22%)/$65-100K (24%) |
| Household income $45-64K (64%) | |

Further analysis reveals that knowing someone who is infertile does not play a significant role in terms of opinions of banning specific RGTs. That is, Canadians who know someone with an infertility problem (59%) are only marginally more likely to believe it is either very or somewhat important to ban certain RGTs than those who do not know someone with this problem (55%).

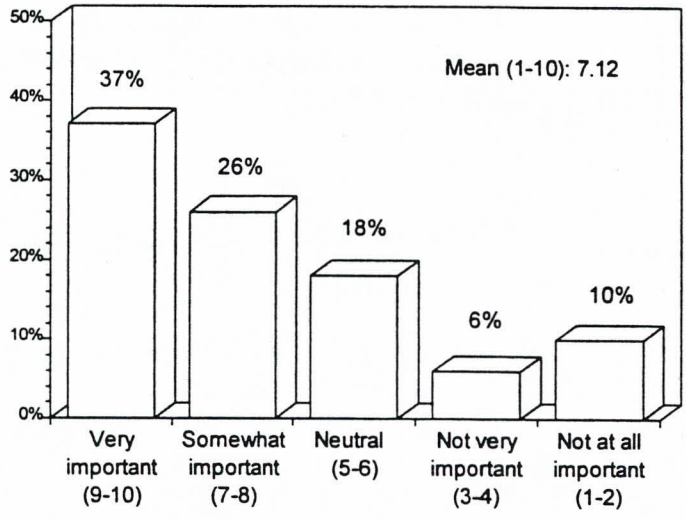
Interestingly, those who claim to be *somewhat knowledgeable* (7 or 8 on the 1-10 scale) about RGTs are also marginally more likely than average to feel it is important to ban specific technologies (61%). Conversely, those who report that they are *not at all knowledgeable* (1 or 2 on 10-point scale) on the topic are more likely than average to feel the prohibition of RGTs is unimportant (31% versus 18% average), although notably, 43% of these individuals do still feel that it is important.

## B. Importance of Creating A New Regulatory Body to Oversee and Regulate RGTs

Consistent with their desire for the federal government to ban specific RGTs, Canadians would also support the creation of a new regulatory body to oversee and regulate the field. Indeed, with almost two-in-three (63%) believing this new regulatory body is important, this is even higher than the proportion supporting the prohibition of certain technologies (56%, refer to Figure 2) (Figure 3). More specifically, 37% of those surveyed rate the creation of this new regulatory body as *very important*, while an additional 26% rate it as *somewhat important*. In contrast, only 16% view this as unimportant, while an additional 18% view this more neutrally. The mean importance rating is a moderately high 7.1 out of 10.

**Figure 3**

**Importance of Creating A New Regulatory Body to Oversee and Regulate RGTs**



Question: Using a scale from 1 to 10 where 1 is not at all important and 10 is extremely important, how important is it to you that the Government of Canada put in place a new regulatory body to oversee and regulate reproductive and genetic technologies?

As expected, the socio-demographic variations are very similar to those associated with the importance of banning specific RGTs (Tables 3 and 4). In particular, women, and especially those 35 years or older, are not only more likely than the youngest and oldest males to support the prohibition of certain unacceptable technologies, but also the creation of a new regulatory body to oversee and regulate the field. Similarly, the better-educated and middle income earners are not only more likely than the lower educated and lower income to view the prohibition of RGTs as more important, but also a new regulatory body as such. It is notable, however, that there are no regional variations apparent on this issue.

**Table 4**

**Importance of Creating A New Regulatory Body to Oversee and Regulate RGTs Socio-demographic Profile**

| More likely very/somewhat important (63%): | More likely not very/at all important (16%): |
|---|---|
| Women (69%), esp. 35+ (71%) | Men, 18-34 (21%)/55+ (23%) |
| Completed university (70%) | Elementary school educ. (28%) |
| Hhld income $35-44K (67%)/55-74K (69%) | Household income under $25K (20%) |

Once again, Table 5 reveals that knowing someone with an infertility problem and being more knowledgeable than average about RGTs, along with being more supportive of prohibiting specific technologies, is positively associated with support for the creation of a new regulatory body to oversee and regulate the field.

## Table 5

### Importance of Creating A New Regulatory Body to Oversee and Regulate RGTs By Whether Know Someone With An Infertility Problem, Knowledge of RGTs and Importance of Banning Specific RGTs

| | Importance of creating a new regulatory body: | | | | |
|---|---|---|---|---|---|
| | Very Important % | Somewhat Important % | Neutral % | Not very Important % | Not at all Important % |
| Overall: | 37 | 26 | 18 | 6 | 10 |
| **Whether know someone infertile:** | | | | | |
| Yes | 40 | 27 | 17 | 5 | 8 |
| No | 35 | 24 | 19 | 7 | 12 |
| **Knowledge about RGTs:** | | | | | |
| Very knowledgeable | 53 | 17 | 18 | 4 | 6 |
| Somewhat knowledgeable | 44 | 23 | 14 | 5 | 11 |
| Neutral | 35 | 31 | 18 | 5 | 8 |
| Not very knowledgeable | 32 | 27 | 23 | 9 | 8 |
| Not at all knowledgeable | 29 | 18 | 22 | 6 | 19 |
| **Government banning specific RGTs:** | | | | | |
| Very important | 69 | 15 | 7 | 1 | 4 |
| Somewhat important | 32 | 38 | 19 | 5 | 4 |
| Neutral | 14 | 39 | 34 | 5 | 6 |
| Not very important | 16 | 20 | 25 | 28 | 10 |
| Not at all important | 17 | 7 | 16 | 8 | 50 |

# IV. Views on Prohibition and Regulation of Specific RGTs

## A. Whether Specific RGTs Should Be Banned or Regulated

Next, respondents were read a list of ten specific RGTs and asked to indicate whether each should be *banned, regulated* or *remain as it is* (i.e., unregulated).

Once again it is clear that Canadians would support government legislation in the RGT area. As a whole, they believe the current situation in the industry is unsatisfactory and they definitely want to see changes take place. Depending on the specific activity, Canadians prefer either the prohibition or regulation of each of the ten RGTs examined rather than the status quo. Indeed, the proportion of respondents who feel each of the activities should *remain as it is* ranges from a low of 8% to a high of only 29%. In contrast, the proportion indicating that each of the activities should be *banned* ranges from a low of 24% to a high of 74%, while between 15% and 52% prefer that the activities be *regulated* (Table 6).

A review of Table 6 also reveals that a number of RGTs are deemed to be unacceptable to Canadians. Overall, it is apparent that a majority of Canadians would prefer to ban the genetics-based technologies, such as cloning, genetic manipulation, sex selection, and the use of genetic material from the dead, rather than allow and regulate them. In comparison, three reproductive technologies, such as paying women for their eggs, paying men for their sperm and paying surrogate mothers, are viewed less offensively, with a larger proportion of respondents preferring to regulate rather than ban them.

The most offensive activity is the "cloning of human embryos". Three-in-four (74%) Canadians do not believe this activity should be allowed. The views of 15% of respondents are not as extreme as they would prefer to see this activity regulated rather than banned. In contrast, only 8% of those surveyed state that no changes are required in this area. The preference for banning the cloning of human embryos is widespread among Canadians, across the genders, age groups, educational backgrounds and income levels.

"Changing the genetic make-up of egg and sperm so that certain inherited traits are altered to change the physical characteristics of a child" is also offensive to a solid majority of Canadians. Two-in-three (66%) respondents want this activity banned. Another 19% of those surveyed report that although this activity should not be banned, it should at least be regulated.

Only 14% of the respondents feel that the status quo is acceptable. The prohibition of this activity is also widely preferred by a majority of Canadians from all walks of life.

Sex selection for non-medical reasons is also viewed unfavourably by Canadians, with 60% saying it should be banned. Another 17% want this activity to be regulated, although notably, a slightly higher proportion (22%) would prefer the status quo, with no legislation governing this. With the exception of men 18-34 and those who believe it is not very important to create a new regulatory body, a majority in each of the subgroups prefer banning non-medical sex selection.

Other activities where a majority, albeit a slim majority, of respondents feel they should be banned include: "the retrieval of sperm or eggs from dead men or women to help people have a baby" (53%); and "changing the genetic make-up of egg and sperm so that certain inherited traits are permanently altered for future generations" (52%).

In terms of the five remaining activities, Canadians are more likely to prefer regulation rather than prohibition. Interestingly, while a majority (53%) of the respondents state that the use of genetic material "from dead men and women to help people have a baby" should be banned, only 27% would prohibit the use of genetic material from fetuses. Indeed, a slim majority (52%) of respondents believe the "removal of reproductive material from fetuses for research or to help other people have a baby" should be allowed, albeit regulated. It is postulated that the use of reproductive material for research may be more appealing, or at least less controversial, than using it to help others have a child.

A majority (52%) of Canadians also believe "research on human embryos" (52%) should be allowed but regulated, while only 24% feel it should be banned. Similarly, almost half of those surveyed believe "allowing payment to a surrogate mother who carries a child for someone else" should be regulated (48%) rather than banned (26%). In addition, a plurality of 40% of respondents support regulating the sale of both eggs and sperm, while 33% prefer the former to be banned and a slightly lower proportion (29%) prefer prohibiting the sale of sperm.

Notably, "paying male donors for their sperm" and "female donors for their eggs" are the 2 activities Canadians believe require the least amount of regulation. These 2 reproductive technologies have the highest proportion of

respondents saying it should *remain as it is* (29% and 24%, respectively). These are followed closely by paying surrogate mothers (23%) and sex selection for non-medical reasons (22%). However, it is again notable that in each of these areas, the proportion supporting the status quo is relatively low and is selected by the least number of respondents.

**Table 6**

**Views on Prohibition and Regulation of Specific RGTs**

| | Banned % | Regulated % | Remain as it is % | Don't know/ Refused % |
|---|---|---|---|---|
| Cloning human embryos | 74 | 15 | 8 | 2 |
| Changing the genetic make-up of egg and sperm so that certain inherited traits are altered to change the physical characteristics of a child, such as height | 66 | 19 | 14 | 1 |
| Procedures that allow parents, for non-medical reasons, to choose the sex of their baby | 60 | 17 | 22 | 1 |
| Retrieval of sperm or eggs from dead men or women to help people have a baby | 53 | 32 | 12 | 2 |
| Changing the genetic make-up of egg and sperm so that certain inherited traits are permanently altered for future generations | 52 | 34 | 12 | 2 |
| Paying female donors for their eggs | 33 | 40 | 24 | 3 |
| Paying male donors for their sperm | 29 | 40 | 29 | 2 |
| Removing reproductive material from fetuses for research or to help other people have a baby | 27 | 52 | 18 | 4 |
| Allowing payment to a surrogate mother who carries a child for someone else | 26 | 48 | 23 | 3 |
| Allowing research on human embryos | 24 | 52 | 20 | 3 |

Question: The federal government is considering **prohibiting or banning** certain reproductive and genetic technologies considered as **ethically unacceptable**. In other cases the government is proposing to **regulate** technologies to ensure they are **acceptable and safe.** This would mean that the area would be subject to conditions, standards and regulations. I am going to read you 10 activities. In your opinion, should... (READ AND ROTATE Q5-14) be banned, regulated or remain as it is?

A review of the subgroups of Canadians who are more likely than average to support banning each of the specific activities reveals many similarities across the different RGTs examined. Indeed, it is notable that many of the same variations are apparent in terms of both the different reproductive technologies and the various genetics-based technologies. In general, older Canadians, and especially older women, those with either an elementary school or community college education, and those who have had children, are more likely than average to support banning the different technologies rather than regulating them (Table 7). And not surprisingly, those who initially indicated that it is *very important* to ban specific unacceptable RGTs are also more likely than average to prefer the banning of each activity. Interestingly, those who believe it is *very important* that the federal government create a new regulatory body to oversee and regulate RGTs are also more supportive of the prohibition of the activities.

Similarly, a number of subgroups of Canadians are more likely than average to support the regulation rather than the prohibition of many of the activities examined. In particular, younger to middle-age Canadians, university graduates, and the more affluent, are more likely than other Canadians to prefer regulating many of the activities. As expected, those who know someone with an infertility problem, along with those who have never had children, are also more inclined to prefer the regulation of the various RGTs. Interestingly, those who feel it is only *somewhat important* or even *not very important* to ban specific unacceptable RGTs are also more likely to want the different activities regulated rather than banned.

## Table 7

## Views on Prohibition and Regulation of Specific RGTs

## Socio-demographic Profile

More support banning cloning human embryos (74%):
Atlantic Canadians (79%)
65 years or older (84%)
Women 35+ (81%)
Community college education (78%)
Household income $75-100K (79%)
Have children (78%)
Know someone who is infertile (78%)
Not very knowledgeable about RGTs (78%)
Very/somewhat impt to ban specific RGTs (83%)
Very impt to create new regulatory body (82%)

More support regulating cloning human embryos (15%):
Men 18-34 years (26%)
Completed university (20%)
Hhld income $55-64K (19%)/$100K+ (23%)
Have never had children (21%)
Very knowledgeable about RGTs (19%)
Not at all impt to ban specific RGTs (23%)
Not very impt to create new regulatory body (24%)

More support banning changing child's genetic makeup (66%):
Residents of B.C./Territories (73%)
Women 18-54 years (70%)
Community college education (70%)
Very impt to ban specific RGTs (79%)
Very impt to create new regulatory body (73%)

More support regulate changing child's genetic makeup (19%):
Men 18-34 years (27%)
Completed university (23%)
Household income $35-44K (24%)
Have never had children (25%)
Very knowledgeable about RGTs (23%)
Not very/at all impt to ban specific RGTs (24%)
Not very impt to create new regulatory body (27%)

More support banning choosing sex of baby (60%):
Residents of Prairies/BC/Territories (65%)
Women (65%), esp. 35-54 years (68%)
Some/completed university (66%)
Household income $100K+ (66%)
Have children (64%)
Know someone with infertility problem (64%)
Very impt to ban specific RGTs (72%)
Very impt to create new regulatory body (69%)

More support regulating choosing sex of baby (17%):
Women 18-34 years (21%)
Have never had children (21%)
Not very impt to ban specific RGTs (23%)

More support banning retrieving reprod. mat. from dead (53%):
Atlantic Canadians (60%)
55 years or older (63%)
Elementary (69%) or community college (58%)
Household income under $25K (59%)
Not at all knowledgeable about RGTs (57%)
Very impt to ban specific RGTs (61%)

More support regulate retrieving reprod. mat. from dead (32%):
Women 35-54 years (40%)
Completed university (43%)
Hhld income $35-44K (36%)/$75K+ (42%)
Know someone with an infertility problem (37%)

## Table 7 (cont'd)
## Views on Prohibition and Regulation of Specific RGTs
## Socio-demographic Profile

More support banning change genetic makeup permanently (52%):
65 years or older (57%)
Women 18-34 (56%)/55+ (57%)
Community college education (57%)
Household income $65-74K (57%)
Not very knowledgeable about RGTs (58%)
Very impt to ban specific RGTs (64%)
Very impt to create new regulatory body (57%)

More support regulate changing genetic makeup permanently (34%):
35-44 years (38%)
Men 18-34 years (39%)
Completed university (42%)
Hhld income $35-44K (39%)/$75K+ (45%)
Never had children before (39%)
Somewhat knowledgeable about RGTs (39%)
Not very impt to ban specific RGTs (38%)
Somewhat impt to create new regulatory body (40%)

More support banning paying women for eggs (33%):
55 years or older (52%), esp. women 55+ (54%)
Elementary school education (43%)
Hhld income under $25K (40%)/$45-54K (37%)
Have children (38%)
Very knowledgeable about RGTs (38%)
Very impt to ban specific RGTs (44%)
Very impt to create new regulatory body (40%)

More support regulating paying women for eggs (40%):
25-54 year olds (45%)
Community college (45%)/university grads (48%)
Household income $75K+ (53%)
Know someone with infertility problem (45%)
Somewhat knowledgeable about RGTs (44%)
Somewhat impt to ban specific RGTs (47%)
Somewhat impt to create new regulatory body (48%)

More support banning paying men for sperm (29%):
Residents of Ontario (33%)
55 years or older (51%), esp. women 55+ (55%)
Elementary school education (42%)
Household income under $25K (33%)
Have children (35%)
Very knowledgeable about RGTs (35%)
Very impt to ban specific RGTs (40%)
Very impt to create new regulatory body (36%)

More support regulating paying men for sperm (40%):
35-54 year olds (45%)
Completed university (46%)
Household income $75K+ (51%)
Not very knowledgeable about RGTs (45%)
Somewhat impt to ban specific RGTs (47%)
Somewhat impt to create new regulatory body (44%)

More support banning removal reprod. mat. from fetus (27%):
65 years or older (31%)
Elementary school (37%)/College (31%) education
Household income $45-54K (32%)
Have children (30%)
Very impt to ban specific RGTs (40%)
Very impt to create new regulatory body (32%)

More support regulating removal reprod. mat. from fetus (52%):
Residents of Quebec (57%)
18-24 or 35-44 years (57%)
Completed university (61%)
Hhld income $25-34K (57%)/$75K+ (62%)
Have never had children (57%)
Not very knowledgeable about RGTs (58%)
Somewhat impt to ban specific RGTs (60%)
Somewhat impt to create new regulatory body (59%)

**Table 7 (cont'd)**
**Views on Prohibition and Regulation of Specific RGTs**
**Socio-demographic Profile**

More support banning paying surrogate mothers (26%):
45 years or older (37%), esp. women 55+ (47%)
Elementary (34%)/high school (30%) education
Household income under $25K (31%)
Have children (29%)
Very knowledgeable about RGTs (33%)
Very impt to ban specific RGTs (36%)
Very impt to create new regulatory body (33%)

More support regulating paying surrogate mothers (48%):
Residents of B.C./Territories (53%)
25-44 years of age (56%)
Post-secondary education (54%)
Hhld income $55-64K (52%)/$75-100K (65%)
Know someone with infertility problem (52%)
Somewhat impt (55%)/Not very impt (54%) ban RGTs
Somewhat impt (54%)/Not very impt (53%) create new body

More support banning human embryo research (24%):
Prairie residents (29%)
65 years or older (39%)
Elementary school education (29%)
Household income under $25K (32%)
Have children (28%)
Very impt to ban specific RGTs (35%)
Very impt (28%)/Not at all impt (28%) new regulatory body

More support regulating human embryo research (52%):
25-44 years of age (60%)
Completed university (66%)
Household income $55K+ (62%)
Have never had children (56%)
Know someone with an infertility problem (57%)
Somewhat (60%)/Not very (56%) impt ban RGTs
Very/Somewhat impt new regulatory body (57%)

Respondents who indicated that they prefer a specific RGT to be *regulated* rather than *banned* or kept unregulated (i.e., *remain as it is*), were further probed on the degree of importance they place on the regulation of the activity. A review of Table 8 reveals that, overall, those who prefer regulating each of the 10 RGTs feel quite strongly about this. Indeed, the proportion indicating that this is either *very* or *somewhat important* ranges from a low of 73% to a high of 91%. Correspondingly, the mean importance ratings are high, ranging between 7.8 and 8.9.

It is clear once again that Canadians are much more concerned about the genetics-based technologies than the reproductive technologies. In particular, again, Canadians feel most strongly about the cloning of human embryos. Consistent with the finding that this is the activity Canadians most want to ban (refer to Table 6), among those who would rather it be regulated, virtually everyone feels that it is important that it be regulated. Indeed, 67% of those preferring regulation think this is critical, rating this a 9 or 10 on the 1-10 scale, while an additional 24% think that it is *somewhat*

*important.* In contrast, none of the respondents report that this is *not at all important,* while a mere 1% indicate that its regulation is *not very important* to them.

Canadians are also convinced that 5 other all genetics-based technologies should be regulated. In particular, a majority feel that regulating the following 5 genetics-based technologies is *very important*: "changing the genetic make-up of egg and sperm so that certain inherited traits are permanently altered for future generations" (63%); "allowing research on human embryos" (59%); "changing the genetic make-up of egg and sperm so that certain inherited traits are altered to change the physical characteristics of a child" (56%); "retrieval of sperm or eggs from dead men or women to help people have a baby" (56%); and "removing reproductive material from fetuses for research or to help other people have a baby" (55%). Indeed, an additional 26% to 33% feel that regulating these activities is *somewhat* important, while the proportion rating each of these activities as unimportant ranges from a low of only 1% to 3%.

In comparison, the regulation of the three reproductive technologies is not as critical. Nonetheless, approximately half report that "allowing payment to a surrogate mother who carries a child for someone else" (51%), "paying female donors for their eggs" (48%) and "paying male donors for their sperm" (47%), are *very important,* while an additional 34%, 36% and 35%, respectively, believe it is only *somewhat important.* Only 2%, 3%, and 4%, respectively, rate each of these activities as unimportant.

Interestingly, although sex selection for non-medical reasons, a genetics-based technology, was ranked third in terms of activities Canadians wanted banned (refer to Figure 6), among the 17% of respondents who prefer that it be regulated, only 38% believe that the regulation of this activity is *very important,* while an additional 35% believe it is only *somewhat important,* although notably, only 5% view this as unimportant.

## Table 8

## Importance of Regulating Specific RGTs

| | Very impt (9-10) | Somwt impt (7-8) | Neutral (5-6) | Not Very impt (3-4) | Not At All impt (1-2) | DK/ Ref | Mean (1-10) |
|---|---|---|---|---|---|---|---|
| Cloning human embryos | 67 | 24 | 9 | 0 | 1 | 0 | 8.85 |
| Changing the genetic make-up of egg and sperm so that certain inherited traits are permanently altered for future generations | 63 | 27 | 9 | 1 | 1 | 0 | 8.72 |
| Allowing research on human embryos | 59 | 29 | 11 | < 1 | 1 | < 1 | 8.59 |
| Changing the genetic make-up of egg and sperm so that certain inherited traits are altered to change the physical characteristics of a child, such as height | 56 | 30 | 11 | 1 | < 1 | < 1 | 8.56 |
| Retrieval of sperm or eggs from dead men or women to help people have a baby | 56 | 26 | 16 | 1 | 2 | 0 | 8.33 |
| Removing reproductive material from fetuses for research or to help other people have a baby | 55 | 33 | 10 | 1 | 1 | < 1 | 8.52 |
| Allowing payment to a surrogate mother who carries a child for someone else | 51 | 34 | 12 | 1 | 1 | < 1 | 8.37 |
| Paying female donors for their eggs | 48 | 36 | 14 | 2 | 1 | < 1 | 8.24 |
| Paying male donors for their sperm | 47 | 35 | 14 | 2 | 2 | 0 | 8.13 |
| Procedures that allow parents, for non-medical reasons, to choose the sex of their baby | 38 | 35 | 22 | 3 | 2 | 0 | 7.76 |

*Among respondents who prefer that a specific RGT is regulated, rather than banned or left as it is (see Table 6; n=183, 409, 630, 233, 388, 627, 577, 485, 477, 206 respectively for each question above)

Question: On a scale of 1 to 10, where 1 is not at all important and 10 is extremely important, how important do you think it is to regulate this?

## B. Role of New Regulatory Body

Respondents were also read a list of six different roles that the new regulatory body could play and asked to indicate the importance of each. Not surprisingly, Canadians feel all six objectives are important. Indeed, with high mean importance ratings ranging between 7.5 and 9.1, it is clear Canadians believe each of the six areas should be an integral part of the new regulatory body, confirming their desire for regulation in the industry and their support for the new regulatory body (Figure 4).

Notwithstanding their overall support for all six roles, Canadians believe the most crucial objective for the new regulatory body is ensuring that "human reproductive materials, such as sperm, eggs and embryos, are treated with respect". A solid majority, among both genders, all age groups, educational backgrounds and income levels, view this role as the most important. More specifically, eight-in-ten (78%) respondents rate this role a 9 or 10 on the 1-10 importance scale, while an additional 12% also believe it is important, but to a slightly less extent, resulting in a high mean importance rating of 9.1. In contrast, only 4% think that this is unimportant, while 5% view the level of importance as only average.

An educational and information dissemination role is also believed to be critical for the new regulatory body. Canadians, from a variety of backgrounds, think the new regulatory body should also be responsible for keeping up-to-date on "emerging issues and new technologies and keeping Canadians informed of these". Eighty-seven percent (87%) of respondents feel it is either *very* (71%) or *somewhat* (16%) *important* that the body undertake this educational and information providing role. Only 5% of those surveyed view this role as unimportant.

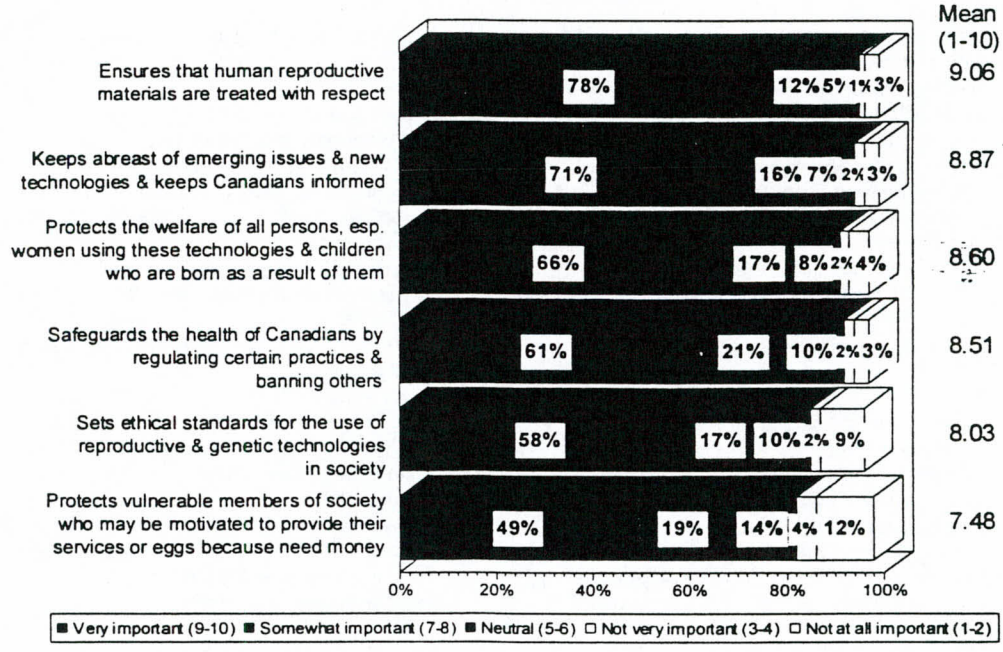
Other areas where a majority of Canadians feel it is *very important* that the regulatory body play a part include: "protecting the welfare of all persons, especially women using these technologies and children who are born as a result of them" (66%); "safeguarding the health of Canadians by regulating certain practices and banning others" (61%); and "setting ethical standards for the use of reproductive and genetic technologies in society, such as the commercialization of sperm and eggs" (58%).

Although the remaining role of "protecting vulnerable members of our society, such as surrogate mothers or donors who may be motivated to provide their services or eggs because they need money" is assessed to be

less critical than the other five areas, still, a majority of 68% think it is important. In fact, half (49%) view this as a *very important* role, while an additional 19% regard it as *somewhat important*. And only 16% think that activity is unimportant.

**Figure 4**

**Importance of Specific Roles for the New Regulatory Body**



Question: The federal government is considering developing legislation for a new regulatory body to oversee and regulate reproductive and genetic technologies. Again, using a scale from 1 to 10 where 1 is not at all important and 10 is extremely important, how important is it to you, that this regulatory body [READ AND ROTATE]

It is clear from Table 9 that the same subgroups of Canadians view each of the six roles as more important than other Canadians. It is also notable that these socio-demographic subgroups are virtually identical to the subgroups most inclined to support legislation (i.e., prohibition and regulation, refer to Tables 3, 4, 7 and 9) in the RGT field. In particular, women, especially those 35-54 years, along with the better educated and more affluent, those who know someone with an infertility problem, those who are knowledgeable about RGTs and those who believe it is important to both ban specific

unacceptable technologies and to create a new regulatory body to oversee and regulate the field, tend to view each of the different areas as being more significant than other Canadians.

**Table 9**

**View Specific Roles for the New Regulatory Body As More Important Than Average**

**Socio-demographic Profile**

More important treat human reprod material with respect (9.1):
Women (9.2), esp. 35+ (9.3)
35-54 years of age (9.2)
Post-secondary education (9.2)
Hhld income $55-64K (9.2)/$75K+ (9.2)
Know someone with infertility problem (9.3)
Very knowledgeable about RGTs (9.4)
Very/somewhat impt ban specific RGTs (9.5)
Very/somewhat impt create new regulatory body (9.5)

More important keep abreast emerging issues/technologies (8.9):
Women (9.1), esp. 35+ (9.2)
35-54 years of age (9.0)
Post-secondary education (9.1)
Hhld income $55-74K (9.2)/$100K+ (9.0)
Know someone with infertility problem (9.1)
Very/somewhat knowledgeable about RGTs (9.1)
Very/somewhat impt ban specific RGTs (9.2)
Very/somewhat impt create new regulatory body (9.4)

More important protect welfare of all persons (8.6):
Atlantic Canadians (8.8)
Women (8.9)
35-54 years of age (8.7)
Post-secondary education (8.8)
Hhld income $55-74K (8.8)/$100K+ (8.8)
Know someone with infertility problem (8.9)
Very/somewhat knowledgeable about RGTs (8.8)
Very/somewhat impt ban specific RGTs (9.0)
Very/somewhat impt create new regulatory body (9.2)

More important to safeguard Canadians' health (8.5):
Atlantic Canadians (8.7)
Women (8.7)
35-64 years of age (8.7)
Community college (8.8)/Univ. grads (8.7)
Household income $55K+ (8.7)
Know someone with infertility problem (8.8)
Somewhat knowledgeable about RGTs (8.6)
Very/somewhat impt ban specific RGTs (9.1)
Very/somewhat impt create new regulatory body (9.1)

More important set ethical standards for RGT use (8.0):
Women (8.3), esp. 18-54 years (8.4)
35-54 years of age (8.4)
Post-secondary education (8.5)
Hhld income $55-64K (8.2)/$75K+ (8.5)
Know someone with infertility problem (8.4)
Very/somewhat knowledgeable about RGTs (8.2)
Very/somewhat impt ban specific RGTs (8.7)
Very/somewhat impt create new regulatory body (8.8)

More important protect vulnerable members of society (7.5):
Women (7.8), esp. 35-54 years (8.2)
35-54 years of age (7.9)
Some/completed university (7.9)
Hhld income $55-64K (7.8)/$75K+ (7.8)
Know someone with infertility problem (7.8)
Somewhat knowledgeable about RGTs (7.6)
Very/somewhat impt ban specific RGTs (8.0)
Very/somewhat impt create new regulatory body (8.2)

## C. Importance of Regulatory Activities

Once again it is apparent that Canadians have high expectations of the new regulatory body. When read three different activities that could be undertaken by the new body and asked to rate the importance of each, at least eight-in-ten believe each of the activities are important. In fact, this insistence that the new regulatory body undertake all three activities is widespread among the various subgroups of Canadians.

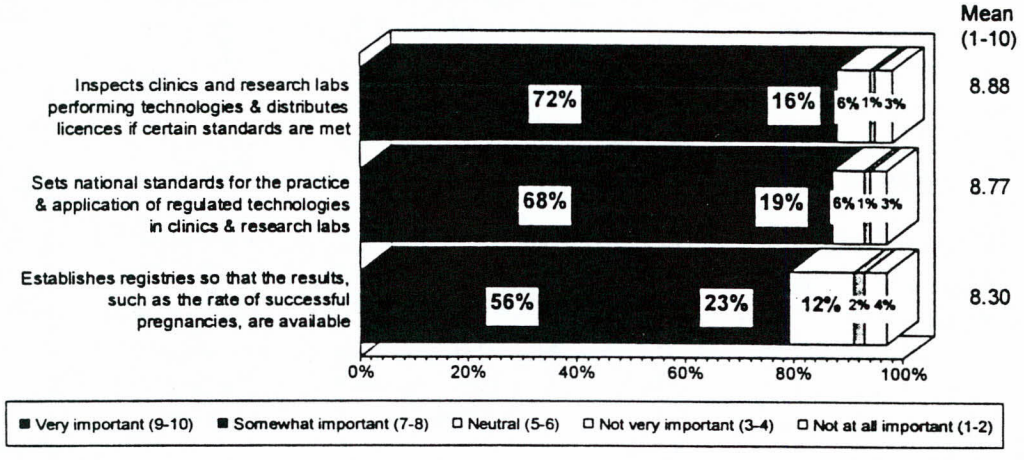
Canadians feel most strongly that the regulatory body should "inspect clinics and research laboratories performing these technologies and distribute licences if certain standards are met" (Figure 5). Indeed, the mean importance rating is a high 8.9 out of 10. That is, almost three-quarters (72%) of the respondents rate this activity as *very important*, while another 16% view it as *somewhat important*. A mere 4% think that this activity is unimportant.

Similarly, but to a slightly lesser extent, Canadians also believe the regulatory body should "set national standards for the safe practice and application of these regulated technologies in clinics and research laboratories". Again, the mean importance rating is a high 8.8, with 68% and 19%, respectively, of respondents rating this activity as *very* and *somewhat important*. And only 4% do not think this is important.

In comparison, Canadians feel that it is not as critical to "establish registries so that the results, such as the rate of successful pregnancies, are available to the public. However, it is notable that a majority of 56% of those surveyed do also believe that this is *very important*, while 23% feel it is *somewhat important*. And only 6% believe this is an unimportant role for the new regulatory body. Furthermore, the mean importance rating is still a relatively high 8.3.

**Figure 5**

**Importance of Specific Activities of the New Regulatory Body**



Question: As mentioned earlier the federal government is considering developing legislation for a new regulatory body to oversee and regulate reproductive and genetic technologies. Using a scale of 1 to 10 where 1 is not at all important and 10 is extremely important, please tell me how important it is to you that this regulatory body...

Not surprisingly, the socio-demographic variations apparent in Table 10 are virtually identical to those in Table 9 (along with those in Tables 3, 4 and 7). That is, many of the same subgroups of Canadians who view each of the six roles examined as more important than average, also tend to view the three activities as more significant than others do. More specifically, it is once again clear that women, especially those middle-aged, the better educated and more affluent, those who know someone with an infertility problem, those who are very knowledgeable about RGTs and those who believe it is important to both ban specific unacceptable technologies and to create a new regulatory body to oversee and regulate the field, are more apt to believe each of the three activities should be a significant part of the new regulatory body than other Canadians do.

## Table 10

## Importance of Specific Activities of the New Regulatory Body

## Socio-demographic Profile

More important inspect clinics/labs & distribute licences (8.9):
Atlantic Canadians (9.1)
Women (9.1), esp. 35-54 years (9.2)
35-44 years of age (9.1)
Post-secondary education (9.0)
Household income $55-$100K (9.1)
Know someone with infertility problem (9.1)
Very knowledgeable about RGTs (9.2)
Very/somewhat impt ban specific RGTs (9.3)
Very/somewhat impt create new regulatory body (9.4)

More important to set national standards for clinics/labs (8.8):
Atlantic Canadians (9.0)
Women (9.0), esp. 35+ years (9.1)
35-44 years of age (9.0)
Post-secondary education (8.9)
Household income $55-100K (9.0)
Know someone with infertility problem (9.0)
Very knowledgeable about RGTs (8.9)
Very/somewhat impt ban specific RGTs (9.2)
Very/somewhat impt create new regulatory body (9.4)

More important establish registries so results are available (8.3):
Women (8.5), esp. 35-54 years (8.7)
35-44 years of age (8.5)
Community college/Completed university (8.5)
Hhld income $35-64K (8.5)/$75-100K (8.6)
Know someone with infertility problem (8.5)
Very knowledgeable about RGTs (8.7)
Very/somewhat impt ban specific RGTs (8.7)
Very/somewhat impt create new regulatory body (8.7)

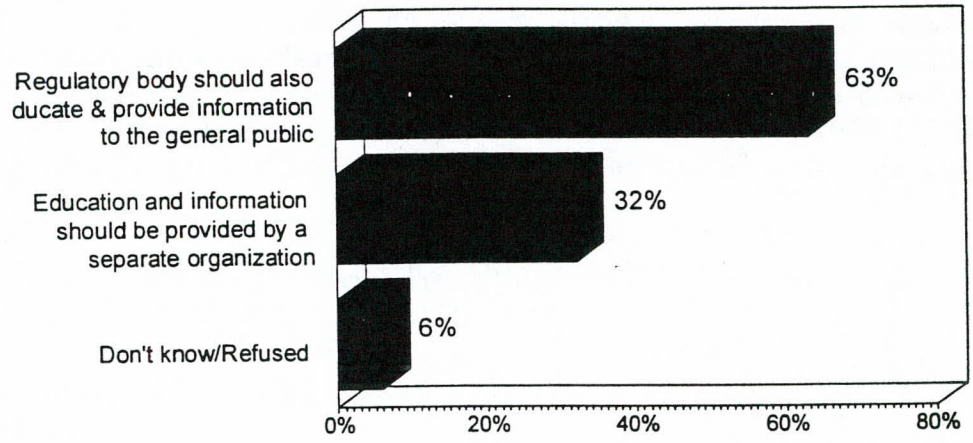
# V. Education/Consultation and National Approach

## A. Whether New Regulatory Body Should Also Educate and Provide Information to the General Public

Once again it is apparent that Canadians prefer the new regulatory body to be multi-faceted, playing a number of different roles. Consistent with the findings revealed in Figure 4, the new regulatory body should not only set standards and enforce them, but also play an additional educational and informative role. Indeed, by a ratio of almost 2 to 1, the respondents feel the new "regulatory body should also educate and provide information to the general public" (63%) rather than leave these activities for a separate organization (32%) (Figure 6). Six percent (6%) of those surveyed are unsure of their preference and do not indicate their preference on this matter.

**Figure 6**

**New Regulatory Body and the Education And Provision of Information to the General Public**



Question: Traditionally, the role of a regulatory body is to set standards and enforce them. If there were to be a regulatory body set up to oversee reproductive technologies, do you think that this body should also educate and provide information to the general public or do you think that education and information should be provided by a separate organization?

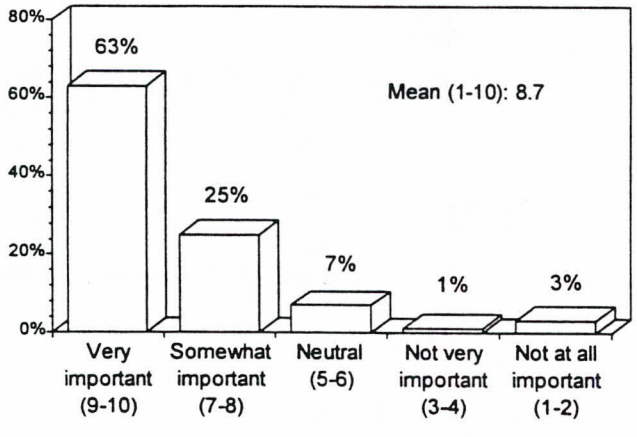
It is notable that there are no significant variations in opinion among the various socio-demographic subgroups. That is, the preference for the new regulatory body to also educate and inform Canadians is universal, across all age groups, educational backgrounds and income levels, although Francophones (70%) feel more strongly about this than Anglophones (60%) do. Conversely, Anglophones (33%) are slightly more supportive of having a separate organization to educate and inform Canadians about RGTs than French speakers (27%) are.

## B. Importance of Regulatory Body Having A Consultative Role

Along with educating and informing the public about RGTs, Canadians believe the new regulatory body should also have a consultative role. In fact, 63% feel it is *very important* that the regulatory body consult with groups and the general public on emerging issues and new technologies before making regulatory decisions, while another 25% think that this is *somewhat important* (Figure 7). Only 4% disagree with this view, rating this additional role as unimportant. Eight percent (8%) of those surveyed either have not made a decision on this issue or provide only average ratings.

**Figure 7**

**Importance of Regulatory Body Having A Consultative Role**



Question: How important do you think it is for the regulatory body to have a consultative role, consulting with groups and the general public on emerging issues and new technologies before making regulatory decisions? Please use a scale from 1 to 10, where 1 is not at all important and 10 is extremely important.

Once again, women, especially those middle-aged, the better educated and more affluent, along with those knowledgeable about RGTs and those who believe it is very important to both ban specific unacceptable technologies and to create a new regulatory body to oversee and regulate it, are most supportive of the new regulatory body also having a consultative role, consulting with groups and the general public before making regulatory decisions (Table 12).

**Table 12**

**More Likely to View Regulatory Body Having A Consultative Role As Important**

**Socio-demographic Profile**

**Average: 87%**

Women (92%), including women 35-54 years (92%)

Post-secondary education (92%)

Household income $75K+ (91%)

Somewhat knowledgeable about RGTs (92%)

Very important to ban specific RGTs (94%)

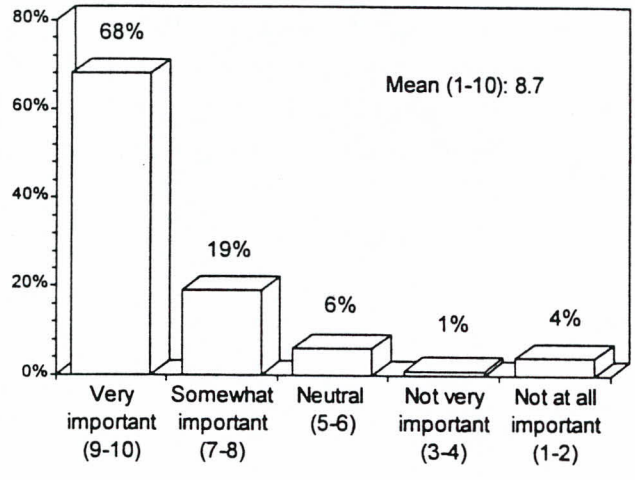
Very important to create new regulatory body (95%)

## C. Importance of Having A Consistent Approach Across the Provinces for Regulating RGTs

Canadians are convinced of the benefits of having a consistent approach across the provinces for regulating RGTs. Indeed, the mean importance rating provided by the respondents is a high 8.7 out of 10 (Figure 8). More specifically, seven-in-ten (68%) respondents perceive a consistent national approach as *very important*, rating it a 9 or 10, while an additional 19% believe it is *somewhat important* (i.e., rating of 7 or 8). In contrast, a mere 5% view a national approach as unimportant, while 7% are unsure, providing either average or "don't know" responses.

**Figure 8**

**Importance of Having A Consistent Approach Across the Provinces for Regulating RGTs**



Question: How important do you think it is to have a consistent approach across the provinces for regulating reproductive and genetic technologies. Please use a scale from 1 to 10, where 1 is not at all important and 10 is extremely important.

And again, it is apparent that middle-age Canadians, along with the more affluent and higher educated and most knowledgeable on the subject are most supportive of a national approach to regulating RGTs (Table 13).

**Table 13**

**More Likely View Having A Consistent Approach Across the Provinces for Regulating RGTs as Very Important**

**Socio-demographic Profile**

**Average: 68%**

Residents of B.C./Territories (75%)

35-64 years of age (74%)

Men 35-54 years (74%)

Women 35-54 years (74%)

Post-secondary education (71%)

Household income $55K+ (73%)

Know someone with infertility problem (72%)

Very/Somewhat knowledgeable about RGTs (72%)

Very important to ban specific RGTs (81%)

Very important to create new regulatory body (85%)

# VI. Demographic Profile

## A. Gender of Respondent

Half (50%) of the respondents surveyed are male, while the remaining 50% are female (Table 14).

**Table 14**

**Gender of Respondent**

| | % Response |
|---|---|
| Male | 50 |
| Female | 50 |

## B. Age of Respondent

The average age of the respondents is 43 years (Table 15). Thirty-two percent (32%) are relatively young, at under 35 years of age, 45% are between 35 and 54 years of age, while one-quarter (23%) are older, at 55 years or older. A comparison with Statistics Canada census data reveals that these sample respondents are relatively representative of the age breakdown of the population of Canada.

**Table 15**

**Age of Respondent**

| | % Sample | % Population[1] |
|---|---|---|
| 18-24 years | 12 | 13 |
| 25-34 years | 20 | 24 |
| 35-44 years | 25 | 21 |
| 45-54 years | 20 | 15 |
| 55-64 years | 11 | 12 |
| 65 years or older | 12 | 16 |
| Mean (years): | 43.1 | -- |

1 Source: Statistics Canada 1996. Catalogue No. 93-336

Question: First of all, do you mind telling me in what year you were born?

Table 16 reveals the proportion of respondents within each of the subgroups, once gender and age are combined together.

**Table 16**

**Genderation of Respondent**

| | % Response |
|---|---|
| Men 18-34 years | 16 |
| Men 35-54 years | 23 |
| Men 55 years or older | 11 |
| Women 18-34 years | 16 |
| Women 35-54 years | 23 |
| Women 55 years or older | 12 |

## C. Educational Background of Respondent

Four-in-ten (38%) of the respondents have only an elementary or high school education (Table 17). In contrast, a majority (61%) of those surveyed report a post-secondary education, including 27% who are university graduates.

**Table 17**

**Educational Background of Respondent**

| | % Response |
|---|---|
| Elementary School | 5 |
| High School | 33 |
| Community College | 22 |
| Some University | 12 |
| Completed University | 27 |
| Don't Know/Refused | < 1 |

Question: First, what is the highest level of schooling that you have completed? (READ)

## D. Whether Ever Had Children

Two-thirds (65%) of the respondents report that they have children, while one-in-three (35%) indicate that they have never had children (Table 18).

**Table 18**

**Whether Ever Had Children**

| | % Response |
|---|---|
| Yes | 65 |
| No | 35 |

Question: Have you ever had children?

## E. Infertility Among Immediate Family or Close Friends

Somewhat surprisingly, half of the respondents surveyed know someone, among their immediate family or close friends, who have had an infertility problem or been unable to conceive a child of their own (Table 19). Conversely, 48% of those surveyed do not know anyone close to them with an infertility problem.

**Table 19**

**Infertility Among Immediate Family or Close Friends**

| | % Response |
|---|---|
| Yes | 52 |
| No | 48 |
| Don't Know/Refused | < 1 |

Question: Do you know anyone, among your immediate family or your close friends, who has had an infertility problem or been unable to conceive a child of their own?

## F. Annual Household Income

The respondents are relatively evenly divided in terms of their annual household income. Thirty percent (30%) of those surveyed report a household income of under $35,000, while 28% report that their household income is $35,000-$54,000 and 31% indicate that it is at least $55,000 (Table 20). Nine percent (9%) of those surveyed either choose not to divulge this information or are unaware of it.

**Table 20**

**Annual Household Income**

| | % Response |
|---|---|
| Under $25,000 | 14 |
| $25,000 - $34,999 | 16 |
| $35,000 - $44,999 | 15 |
| $45,000 - $54,999 | 13 |
| $55,000 - $64,999 | 8 |
| $65,000 - $74,999 | 7 |
| $75,000 - $100,000 | 9 |
| Over $100,000 | 7 |
| Don't know | 2 |
| Refused | 7 |

## G. Language of Interview

Over three-quarters (78%) of the interviews were completed in English, while 22% were in French (Table 21).

**Table 21**

**Language of Interview**

| | % Response |
|---|---|
| English | 78 |
| French | 22 |

Question: Record Language

# A. Interview Schedule

# Interview Schedule

Good evening, my name is ( ) of POLLARA, a national public opinion research organization. We are conducting a survey of attitudes and opinions of Canadians 18 years of age and over on the topic of reproductive and genetic technologies. Would you mind if I asked you some questions? All your responses will be kept strictly confidential.

(IF YES) Thank you

(IF NO) When is a better time for me to call back? (SCHEDULE CALL APPOINTMENT)

(IF REFUSED) Thank and terminate.

---

1. First of all, do you mind telling me in what year you were born (RECORD RESPONSE B IF PERSON IN UNDER 18, ASK TO SPEAK TO SOMEONE WHO IS 18 OR OLDER)

| | |
|---|---|
| 18 To 24 | (12%) |
| 25 To 34 | (20%) |
| 35 To 44 | (25%) |
| 45 To 54 | (20%) |
| 55 To 64 | (11%) |
| 65 And Over | (12%) |
| Mean (age): | 43.12 |

2a Reproductive and genetic technologies include a wide range of activities, both old and new. Reproductive technologies attempt to produce a pregnancy by such processes as in vitro fertilization1, donor insemination and surrogacy arrangements. Genetics-based technologies include sex selection, embryo research and prenatal diagnosis. Many of these reproductive and genetic technologies are currently practiced in Canada.

2ab 2.b Thinking about your own knowledge of reproductive and genetic technologies, how knowledgeable would you say you are? Please use a scale from 1 to 10, where 10 means very knowledgeable and 1 means not at all knowledgeable.

| | |
|---|---|
| Not at all knowledgeable | (6%) |
| 2 | (5%) |
| 3 | (9%) |
| 4 | (9%) |
| 5 | (21%) |
| 6 | (14%) |
| 7 | (14%) |
| 8 | (13%) |
| 9 | (3%) |
| Very knowledgeable | (4%) |
| Don't Know/No Opinion | (<1%) |
| Mean Score For Scale: | 5.48 |

**A. The Government of Canada instituting a comprehensive and balanced regulatory framework for RGTs**

3. Using a 10 point scale, where 1 represents not at all important and 10 represents extremely important, how important is it to you that the federal government ban certain reproductive and genetic technologies that are considered unacceptable by Canadians?

| | |
|---|---|
| Not at all important | (8%) |
| 2 | (3%) |
| 3 | (3%) |
| 4 | (4%) |
| 5 | (15%) |
| 6 | (5%) |
| 7 | (9%) |
| 8 | (14%) |
| 9 | (7%) |
| Extremely important | (27%) |
| Don't Know/No Opinion | (5%) |
| Mean Score For Scale: | 6.83 |

4. Using a scale from 1 to 10 where 1 is not at all important and 10 is extremely important, how important is it to you that the Government of Canada put in place a new regulatory body to oversee and regulate reproductive and genetic technologies?

| | |
|---|---|
| Not at all important | (8%) |
| 2 | (2%) |
| 3 | (3%) |
| 4 | (3%) |
| 5 | (12%) |
| 6 | (6%) |
| 7 | (10%) |
| 8 | (16%) |
| 9 | (8%) |
| Extremely important | (29%) |
| Don't Know/No Opinion | (3%) |
| Mean Score For Scale: | 7.12 |

## B. Views on Prohibition and Regulation

The federal government is considering prohibiting or banning certain reproductive and genetic technologies considered as ethically unacceptable. In other cases the government is proposing to regulate technologies to ensure they are acceptable and safe. This would mean that the area would be subject to conditions, standards and regulations.

I am going to read you 10 activities. In your opinion, should ... (READ AND ROTATE Q5-14) be banned, regulated or remain as it is?

FOR EACH OF Q5-14 WHERE REGULATED IS SELECTED, ASK:

On a scale of 1 to 10, where 1 is not at all important and 10 is extremely important, how important do you think it is to regulate this?

5. a allowing research on human embryos

5ab

| | |
|---|---|
| Banned | (24%) |
| Regulated | (52%) |
| Remain as it is | (20%) |
| Don't Know/No Opinion | ( 3%) |

5A. b if regulated in Q5:

| | |
|---|---|
| Not at all important | (<1%) |
| 2 | (<1%) |

| Mean Score For Scale: | 8.87 |

## C. Regulatory Activities

As mentioned earlier the federal government is considering developing legislation for a new regulatory body to oversee and regulate reproductive and genetic technologies.

Using a scale of 1 to 10 where 1 is not at all important and 10 is extremely important, please tell me how important it is to you that this regulatory body:

21. sets national standards for the safe practice and application of these regulated technologies in clinics and research laboratories

| | |
|---|---|
| Not at all important | (3%) |
| 2 | (1%) |
| 3 | (1%) |
| 4 | (1%) |
| 5 | (3%) |
| 6 | (3%) |
| 7 | (6%) |
| 8 | (13%) |
| 9 | (9%) |
| Extremely important | (59%) |
| Don't Know/No Opinion | (2%) |
| Mean Score For Scale: | 8.77 |

22. inspects clinics and research laboratories performing these technologies and distributes licences if certain standards are met

| | |
|---|---|
| Not at all important | (3%) |
| 2 | (1%) |
| 3 | (<1%) |
| 4 | (1%) |
| 5 | (3%) |
| 6 | (3%) |
| 7 | (6%) |
| 8 | (10%) |
| 9 | (9%) |
| Extremely important | (63%) |
| Don't Know/No Opinion | (2%) |
| Mean Score For Scale: | 8.88 |

23. establishes registries so that the results, such as the rate of successful pregnancies, are available to the public

| | |
|---|---|
| Not at all important | (3%) |
| 2 | (1%) |
| 3 | (1%) |
| 4 | (1%) |
| 5 | (7%) |
| 6 | (5%) |
| 7 | (7%) |
| 8 | (16%) |
| 9 | (8%) |
| Extremely important | (49%) |
| Don't Know/No Opinion | (3%) |
| Mean Score For Scale: | 8.88 |

**D. Education/Consultation and National Approach**

24. Traditionally, the role of a regulatory body is to set standards and enforce them. If there were to be a regulatory body set up to oversee reproductive technologies, do you think that this body should also educate and provide information to the general public or do you think that education and information should be provided by a separate organization?

| | |
|---|---|
| By this regulatory body | (63%) |
| By a separate organization | (32%) |
| Don't Know/No Opinion | (6%) |

25. How important do you think it is for the regulatory body to have a consultative role, consulting with groups and the general public on emerging issues and new technologies before making regulatory decisions? Please use a scale from 1 to 10, where 1 is not at all important and 10 is extremely important.

| | |
|---|---|
| Not at all important | (2%) |
| 2 | (<1%) |
| 3 | (1%) |
| 4 | (1%) |
| 5 | (4%) |
| 6 | (3%) |
| 7 | (7%) |
| 8 | (17%) |
| 9 | (10%) |
| Extremely important | (53%) |
| Don't Know/No Opinion | (1%) |
| Mean Score For Scale: | 8.67 |

26. How important do you think it is to have a consistent approach across the provinces for regulating reproductive and genetic technologies. Please use a scale from 1 to 10, where 1 is not at all important and 10 is extremely important.

| | |
|---|---|
| Not at all important | (3%) |
| 2 | (1%) |
| 3 | (1%) |
| 4 | (1%) |
| 5 | (5%) |
| 6 | (2%) |
| 7 | (6%) |
| 8 | (13%) |
| 9 | (8%) |
| Extremely important | (60%) |
| Don't Know/No Opinion | (1%) |
| Mean Score For Scale: | 8.70 |

## E Classification Data/Demographics

Finally, for statistical purposes only, I'd like to ask you a few questions about yourself.

27. First, what is the highest level of schooling that you have completed? (READ)

| | |
|---|---|
| Elementary School | (5%) |
| High School | (33%) |
| Community College | (22%) |
| Some University | (12%) |
| Completed University | (27%) |
| Don't Know | (<1%) |
| Refused | (<1%) |

28. Have you ever had children

| | |
|---|---|
| Yes | (65%) |
| No | (35%) |

30. Do you know anyone, among your immediate family or your close friends, who has had an infertility problem or been unable to conceive a child of their own?

| | |
|---|---|
| Yes | (52%) |
| No | (48%) |
| Don't Know | (<1%) |
| Refused | (<1%) |

31. Which of the following best represents your annual household income?

| | |
|---|---|
| Less than $25,000 | (14%) |
| $25,000 to $34,000 | (16%) |
| $35,000 to $44,000 | (15%) |
| $45,000 to $54,000 | (13%) |
| $55,000 to $64,000 | ( 8%) |
| $65,000 to $74,000 | ( 7%) |
| $75,000 to $100,000 | ( 9%) |
| More than $100,000 | ( 7%) |
| Don't Know | ( 2%) |
| Refused | ( 7%) |

32. Language

# Collapsed Scales

1. KNOWLEDGE ABOUT RGTs:

| | |
|---|---|
| Very Knowledgeable (10,9) | (7%) |
| Somewhat Knowledgeable (8,7) | (28%) |
| Neutral (5,6) | (36%) |
| Not Very knowledgeable (4,3) | (18%) |
| Not At All Knowledgeable (2,1) | (11%) |
| Don't Know/Refused | (<1%) |

2. IMPORTANT: GOVERNMENT BANS UNACCEPTABLE RGTs:

| | |
|---|---|
| Very Important (10,9) | (33%) |
| Somewhat Important (8,7) | (23%) |
| Neutral (5,6) | (21%) |
| Not Very Important (4,3) | (7%) |
| Not At All Important (2,1) | (11%) |
| Don't Know/Refused | (5%) |

3. IMPORTANCE: REGULATORY BODY OVERSEES RGTs:

| | |
|---|---|
| Very Important (10,9) | (37%) |
| Somewhat Important (8,7) | (26%) |
| Neutral (5,6) | (18%) |
| Not Very Important (4,3) | (6%) |
| Not At All Important (2,1) | (10%) |
| Don't Know/Refused | (3%) |

5A. IMPT: REGULATING HUMAN EMBRYO RESEARCH:

| | |
|---|---|
| Very Important (10,9) | (59%) |
| Somewhat Important (8,7) | (29%) |
| Neutral (5,6) | (11%) |
| Not Very Important (4,3) | (<1%) |
| Not At All Important (2,1) | (1%) |
| Don't Know/Refused | (<1%) |

6A. IMPT: REGULATING PAYING FEMALE DONORS FOR EGGS

| | |
|---|---|
| Very Important (10,9) | (48%) |
| Somewhat Important (8,7) | (36%) |
| Neutral (5,6) | (14%) |
| Not Very Important (4,3) | (2%) |
| Not At All Important (2,1) | (1%) |
| Don't Know/Refused | (<1%) |

7A. IMPT: REGULATING PAYING SURROGATE MOTHERS

| | |
|---|---|
| Very Important (10,9) | (51%) |
| Somewhat Important (8,7) | (34%) |
| Neutral (5,6) | (12%) |
| Not Very Important (4,3) | ( 1%) |
| Not At All Important (2,1) | ( 1%) |
| Don't Know/Refused | (<1%) |

8A. IMPT: REGULATING PARENTS CHOOSING SEX OF BABY

| | |
|---|---|
| Very Important (10,9) | (38%) |
| Somewhat Important (8,7) | (35%) |
| Neutral (5,6) | (22%) |
| Not Very Important (4,3) | ( 3%) |
| Not At All Important (2,1) | ( 2%) |

9A. IMPT: REGULATING REMOVAL REPRODUCTIVE MATERIAL FROM FETUSES

| | |
|---|---|
| Very Important (10,9) | (55%) |
| Somewhat Important (8,7) | (33%) |
| Neutral (5,6) | (10%) |
| Not Very Important (4,3) | ( 1%) |
| Not At All Important (2,1) | ( 1%) |
| Don't Know/Refused | (<1%) |

10A. IMPT: REGULATING CLONING HUMAN EMBRYOS

| | |
|---|---|
| Very Important (10,9) | (67%) |
| Somewhat Important (8,7) | (24%) |
| Neutral (5,6) | ( 9%) |
| Not At All Important (2,1) | ( 1%) |

11A. IMPT: REGULATING PAYING MALE DONORS FOR SPERM

| | |
|---|---|
| Very Important (10,9) | (47%) |
| Somewhat Important (8,7) | (35%) |
| Neutral (5,6) | (14%) |
| Not Very Important (4,3) | ( 2%) |
| Not At All Important (2,1) | ( 2%) |

12A. IMPT: REGULATING CHANGING GENETIC MAKEUP OF EGG & SPERM PERMANENTLY FOR FUTURE GENERATIONS

| | |
|---|---|
| Very Important (10,9) | (63%) |
| Somewhat Important (8,7) | (27%) |
| Neutral (5,6) | ( 9%) |
| Not Very Important (4,3) | ( 1%) |
| Not At All Important (2,1) | ( 1%) |

13A. IMPT: REGULATING CHANGING GENETIC MAKEUP OF EGG & SPERM FOR PHYSICAL CHARACTERISTICS OF CHILD

| | |
|---|---|
| Very Important (10,9) | (56%) |
| Somewhat Important (8,7) | (30%) |
| Neutral (5,6) | (11%) |
| Not Very Important (4,3) | ( 1%) |
| Not At All Important (2,1) | (<1%) |
| Don't Know/Refused | (<1%) |

14A. IMPT: REGULATING RETRIEVING SPERM/EGGS FROM DEAD MEN/WOMEN

| | |
|---|---|
| Very Important (10,9) | (56%) |
| Somewhat Important (8,7) | (26%) |
| Neutral (5,6) | (16%) |
| Not Very Important (4,3) | ( 1%) |
| Not At All Important (2,1) | ( 2%) |

15. LEGISLATION: SAFEGUARD CANADIANS' HEALTH:

| | |
|---|---|
| Very Important (10,9) | (61%) |
| Somewhat Important (8,7) | (21%) |
| Neutral (5,6) | (10%) |
| Not Very Important (4,3) | ( 2%) |
| Not At All Important (2,1) | ( 3%) |
| Don't Know/Refused | ( 3%) |

16. LEGISLATION: ENSURE RESPECT TO REPRODUCTION MATERIAL:

| | |
|---|---|
| Very Important (10,9) | (78%) |
| Somewhat Important (8,7) | (12%) |
| Neutral (5,6) | ( 5%) |
| Not Very Important (4,3) | ( 1%) |
| Not At All Important (2,1) | ( 3%) |
| Don't Know/Refused | ( 2%) |

17. LEGISLATION: PROTECT WELFARE OF WHO USE RGTs:

| | |
|---|---|
| Very Important (10,9) | (66%) |
| Somewhat Important (8,7) | (17%) |
| Neutral (5,6) | ( 8%) |
| Not Very Important (4,3) | ( 2%) |
| Not At All Important (2,1) | ( 4%) |
| Don't Know/Refused | ( 2%) |

18. LEGISLATION: PROTECT VULNERABLE PERSONS:

| | |
|---|---|
| Very Important (10,9) | (49%) |
| Somewhat Important (8,7) | (19%) |
| Neutral (5,6) | (14%) |
| Not Very Important (4,3) | ( 4%) |
| Not At All Important (2,1) | (12%) |
| Don't Know/Refused | ( 3%) |

19. LEGISLATION: SET ETHICAL STANDARDS FOR USING RGTs:

| | |
|---|---|
| Very Important (10,9) | (58%) |
| Somewhat Important (8,7) | (17%) |
| Neutral (5,6) | (10%) |
| Not Very Important (4,3) | (2%) |
| Not At All Important (2,1) | (9%) |
| Don't Know/Refused | (3%) |

20. LEGISLATION: INFORM CND ABOUT NEW TECH/ISSUE:

| | |
|---|---|
| Very Important (10,9) | (71%) |
| Somewhat Important (8,7) | (16%) |
| Neutral (5,6) | (7%) |
| Not Very Important (4,3) | (2%) |
| Not At All Important (2,1) | (3%) |
| Don't Know/Refused | (1%) |

21. BODY: SET NATIONAL STANDARDS FOR RGTs:

| | |
|---|---|
| Very Important (10,9) | (68%) |
| Somewhat Important (8,7) | (19%) |
| Neutral (5,6) | (6%) |
| Not Very Important (4,3) | (1%) |
| Not At All Important (2,1) | (3%) |
| Don't Know/Refused | (2%) |

22. BODY: INSPECT/LICENCE RGTs PERFORMED:

| | |
|---|---|
| Very Important (10,9) | (72%) |
| Somewhat Important (8,7) | (16%) |
| Neutral (5,6) | (6%) |
| Not Very Important (4,3) | (1%) |
| Not At All Important (2,1) | (3%) |
| Don't Know/Refused | (2%) |

23. BODY: PROVIDE RGTs RESULTS TO PUBLIC:

| | |
|---|---|
| Very Important (10,9) | (56%) |
| Somewhat Important (8,7) | (23%) |
| Neutral (5,6) | (12%) |
| Not Very Important (4,3) | (2%) |
| Not At All Important (2,1) | (4%) |
| Don't Know/Refused | (3%) |

25. IMPORTANCE: CONSULTIVE ROLE OF REGULATORY BODY:

| | |
|---|---|
| Very Important (10,9) | (63%) |
| Somewhat Important (8,7) | (25%) |
| Neutral (5,6) | (7%) |
| Not Very Important (4,3) | (1%) |
| Not At All Important (2,1) | (3%) |
| Don't Know/Refused | (1%) |

26. IMPORTANCE: CONSISTENT REGULATION IN ALL PROVINCES

| | |
|---|---|
| Very Important (10,9) | (68%) |
| Somewhat Important (8,7) | (19%) |
| Neutral (5,6) | (6%) |
| Not Very Important (4,3) | (1%) |
| Not At All Important (2,1) | (4%) |
| Don't Know/Refused | (1%) |
